

# Additional Assembly Instructions for Mobile Whiteboard Stand

1. Assemble the stand as per the diagram. The uprights should have the large hole at the top facing inside and the small hole on the outside
2. Please check the photos below and assemble the pivot system in the same way. [This becomes steps F & G on the diagram]
3. Bolt the pivots to the sides of the whiteboard using the 8 small bolts
4. Fit the whiteboard into the stand so the pivot mechanism sits right inside the large holes at both ends
5. Screw on the handles with the washer

This is a friction mechanism which holds the whiteboard stiff when the ends are tightened –***please don't overtighten or the pivots will break!!***

***Always loosen the handles before revolving the whiteboard***
